Bureau of Business Research

The Bureau of Business Research (BBR) was established under the Faculty of Business Administration, University of Chittagong, Bangladesh for undertaking and promoting research on business problems for the benefit of business education in general and managers of the state, semi-state, and private enterprises in Bangladesh in particular. It is also aimed at encouraging cross-fertilization of ideas and knowledge between the academicians and researchers from Bangladesh and other countries by arranging workshop, seminar, symposium, training, and conference on relevant and contemporary issues in the field of business administration. By upholding the standard, the Bureau of Business Research has been contributing to the areas of knowledge creation and policy formulation for the business organizations of Bangladesh since the inception in 1976.

About the Conference

The paradigm shift in functional and operational areas of a business has been a common phenomenon in countries, irrespective of their stage of development, of different parts of the world. The journey, starting from the mechanization driven First Industrial Revolution to the rise of artificial intelligence (AI) in this ongoing era of Fourth Industrial Revolution, not only creates opportunities but also develops challenges for business. For instance, the adoption of AI and other big data technologies leads to the decline in labor intensiveness and the potential intensification of economic disparities on one hand, and the emergence of new roles and industries with improved worker productivity on the other hand. At the same time, the agenda focusing on sustainable development requires an integrated approach that takes into consideration environmental protections along with economic development. Accordingly, companies need to recognize their responsibility toward global sustainability while innovating new ideas, designing business operations, and incorporating contemporary

technologies. Moreover, there is a widespread espousal of digital tools and technologies that allow consumers and markets to communicate and undertake transactions with the rapid accessibility to technological advancement. In aggregate, the use of technology, its management and impact on the environment is complex and continuously changing, which demands high investment in innovations, regulations, and new business practices.

Undoubtedly, multidisciplinary, interdisciplinary, and convergence research can add value to such processes of solving complex interactions among these diversified but interrelated areas. It is, thus, important to find out how contemporary research is contributing to these fields of knowledge. At this backdrop, the Bureau of Business Research, Faculty of Business Administration, University of Chittagong, Bangladesh is going to organize an international conference on "The Future of Business: Innovation, Technology and Sustainability" so that necessary policies can be formulated for shaping the future of business across the world.

Conference Objectives

- To find out the global challenges in innovation, sustainability, and technology across diverse countries and regions.
- To explore the research frameworks, regulations, and mechanisms for ensuring innovation in the complex areas of accounting, management, finance, marketing, human resource management, banking, insurance, management information systems, and environment sustainability.
- To gather integration strategies for solving functional, operational, and environmental problems.
